

Zafar Mahmood

Data Engineer

github.com/zfar- | email@example.com | linkedin.com/in/yourname | City, Country

SUMMARY

Data Engineer with 6 years of experience designing and operating scalable data pipelines, warehouses, and ETL/ELT systems. Skilled in building reliable, cost-efficient data infrastructure that supports analytics and machine learning at scale. [Replace this line with 1-2 sentences on your specific specialty — e.g. streaming systems, cloud migrations, data platform ownership.]

SKILLS

Languages	Python, SQL, [Scala / Java / Bash — edit as needed]
Data Tools	Spark, Airflow, dbt, Kafka [add/remove tools you actually use]
Cloud & Infra	AWS / GCP / Azure, Docker, Terraform [pick your stack]
Databases	PostgreSQL, Snowflake, BigQuery, Redshift [edit to match]

EXPERIENCE

Senior Data Engineer — [Company Name]

[Start Date] – Present | [City / Remote]

- [Replace with a real achievement — e.g. "Built a streaming pipeline processing 50M+ events/day, cutting latency from 1hr to 5min"]
- [e.g. "Migrated on-prem data warehouse to Snowflake, reducing query costs by 40%"]
- [e.g. "Led a team of 3 engineers building the company's core analytics platform"]

Data Engineer — [Previous Company]

[Start Date] – [End Date] | [City / Remote]

- [Replace with a real bullet about a pipeline, system, or dataset you owned]
- [Replace with a real bullet about impact — use numbers where possible]

[Add earlier roles here if relevant to fill out 6 years of experience]

PROJECTS

- [Project name] — one-line description of what it does and the stack used. github.com/zfar-/[repo]
